DETAILED ACTION***Drawings***

The drawings are objected to because solid black shading is used in Figure 1, (7a, 7b), reference numerals are not 1/8 inch in height in Figures 2 and 3 and lines and numerals are not uniformly thick and well-defined in Figure 3. Note 37 CFR 1.84 (m), (p)(3) and (l). Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Art Unit: 3747

Claims 1, 5, 6, 9 and 12 are rejected under 35 U.S.C. 102(b) as being anticipated by Tsunooka (EP 1151902). Tsunooka monitors negative pressure applied to the brake booster at 38 and if a desired pressure level is not reached, increases engine speed to obtain a functional pressure level, paragraphs [0024] - [0026].

Claims 1,2, 3, 7, 9, 10 and 13 are rejected under 35 U.S.C. 102(b) as being anticipated by Izumiura et al. Izumiura et al discloses monitoring brake booster pressure at 34 and if the difference between booster pressure and atmospheric pressure is less than a predetermined value, intake air amount is reduced and spark timing is advanced, paragraph [0133]. Izumiura et al discloses use of spark timing retard to warm up an exhaust treatment device.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 4 and 11 are rejected under 35 U.S.C. 103(a) as being unpatentable over Izumiura et al in view of Unterforsthuber et al. Izumiura et al uses separate sensors, 34, 22, for brake booster and atmospheric pressure. Unterforsthuber et al teaches using a differential pressure sensor to determine the difference between booster and atmospheric pressure. It would have been obvious to one with ordinary skill in the art at the time the invention was made to modify Izumiura et al to use a differential pressure sensor in the system, as taught by Unterforsthuber et al, to reduce the number of parts.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various

Art Unit: 3747

claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Allowable Subject Matter

Claims 8 and 14 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
